Investing involves Risk. Principal loss is possible. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. The social, governance, and/or environmental policy of the Fund could cause it to make or avoid investment that could result in the portfolio underperforming similar funds that do not have such policies. The Fund is a recently organized, diversified management investment company with no operating history. As a result, prospective investors have no track record on which to base their investment decisions.

Diversification does not assure a profit or protect against a loss in a declining market.

The performance of the Fund may diverge from that of the index. Because the fund may employ a representative sampling strategy and may also invest in securities that are not included in the index, the fund may experience tracking error to a greater extent than funds that seek to replicate an index. The funds are not actively managed and may be affected by a general decline in market segments related to the index.
